

Strategy: Beeline reader is a free app that colours the end of one line of text and the start of the next line the same colour. This can be particularly helpful for people who have trouble tracking from line to line.

There are various colour options. My personal favourite is red and blue. You can try them all on the Beeline website and see if any of them help you.

You can download Beeline Reader to your computer and other devices. It's free from www.beelinereader.com.

Once you've downloaded it, you will see a button on the top of your internet browser so you can turn it on or off at any time.

Evidence: Based on reports of multiple students and my own personal experience.

Example: Here's part of a Wikipedia page with Beeline reader activated. Note the 'B' button on the top right of the window.

The screenshot shows a web browser window displaying the Wikipedia page for 'Koala'. The Beeline Reader is activated, indicated by a blue circle around the 'B' button in the top right corner of the browser window. The text on the page is color-coded by line. A blue box highlights a paragraph of text from the article.

Koala

From Wikipedia, the free encyclopedia

For other uses, see [Koala \(disambiguation\)](#).

The **koala** (*Phascolarctos cinereus*, or, inaccurately, **koala bear**^[a]) is an **arboreal herbivorous marsupial** native to **Australia**. It is the **only extant representative of the family Phascolarctidae** and its closest living relatives are the **wombats**. The koala is found in coastal areas of the mainland's eastern and southern regions, inhabiting **Queensland, New South Wales, Victoria, and South Australia**. It is easily recognisable by its stout, tailless body and large head with round, fluffy ears and **large, spoon-shaped nose**. The koala has a **body length of 60–85 cm (24–33 in)** and weighs **4–15 kg (9–33 lb)**. **Pelage** colour ranges from silver grey to chocolate brown. Koalas from the northern populations are typically smaller and lighter in colour than their counterparts further south. These populations possibly are separate **subspecies**, but **this is disputed**.

Koalas typically inhabit open eucalypt woodlands, and the leaves of these trees make up most of their diet. Because this eucalypt diet has **limited nutritional and caloric content**, koalas are **largely sedentary** and sleep up to 20 hours a day. They are **asocial animals**, and **bonding** exists only between **mothers and dependent offspring**. **Adult males communicate with loud bellows** that intimidate rivals and attract mates. Males mark their presence with secretions from **scent glands** located on their chests. **Being marsupials, koalas give birth to underdeveloped young that crawl into their mothers'**
